

AI Opportunity Audit

A 3-week diagnostic of your Context Layer. The infrastructure every other AI audit ignores.

€15,000 fixed fee · Remote delivery · Starts within 2 weeks.

Why this audit is different

Every AI audit on the market measures the same thing: tool adoption, license usage, prompt quality, model selection. They optimize the surface. They miss the layer underneath.

LIZA OS is built on a different premise: whatever you do not define, AI invents. Hallucination is not a model problem. It is a management problem. Your AI is pulling from generic training data because your organization has no Context Layer of its own, no encoded standards, no executable judgment, no system of record for how decisions actually get made.

This audit measures that gap. We map your Context Layer (or absence of one), quantify the Semantic Debt accumulating across your stack, and deliver a CEO-ready business case for closing it. You walk out with the evidence to unlock real budget and the operating model to spend it well.

What you get

- A Context Layer map of your organization: where judgment lives today, who holds it, and where it leaks.
- A Semantic Debt diagnostic across your current stack (Notion, Slack, ChatGPT, Copilot, bespoke tools) showing where contradictions and undefined standards are quietly degrading every AI output.
- The 5 to 8 highest-leverage workflows where encoded standards would compound fastest, ranked by ROI and adoption risk.
- A quantified Context Gap Tax: hours lost to rework, knowledge leakage, inconsistent output, and shadow AI. Most mid-market orgs we measure carry 400k to 700k EUR per year in this hidden cost.
- A CEO-ready business case (PDF and slide-ready) with conservative, expected, and aggressive scenarios.
- A 90-day operational roadmap your team can execute, with or without LIZA OS.
- One executive readout (60 min) with you and, if you choose, your CEO or COO.

Timeline

Week 1 Discovery: 4 to 6 interviews (you + key operators), workflow shadowing, current state mapping, gap map.

Week 2 Synthesis: quantification of Context Gap Tax. Prioritization workshop with you. Draft of CEO business case.

Week 3

Refinement and executive readout. Final business case and 90-day roadmap delivered. Executive readout.

What we need from you

- One internal sponsor (you) for ~4 hours/week across the 3 weeks.
- Access to 4 to 6 operators for 45-minute interviews.
- Read-only sight of your current AI strategy doc, playbooks, and any usage telemetry.
- One 60-minute executive readout slot in Week 3.

Pricing

€15,000 fixed fee, invoiced 50% on kickoff, 50% on delivery of the executive readout. No success fees, no add-ons during the engagement.

If, by the end of Week 1, you do not have full clarity on the scope and direction of the audit, we refund the kickoff invoice in full. No questions.

What this is not

- Not a tool adoption survey. Glean, Guru, and the consultancies already do that. We measure the layer underneath.
- Not a generic AI maturity score. We map your specific Context Layer and quantify your specific Semantic Debt.
- Not a strategy doc. You already have one. This produces the evidence to fund executing it.
- Not a software pitch. The audit is product-agnostic. LIZA OS is one option in the roadmap, never the conclusion.
- Not a 6-month consulting retainer. Three weeks, fixed price, then we leave.

What happens after

You walk out with a CEO-ready business case and the language to defend it. Most clients use the audit to unlock a €25k+ Operationalization Sprint where we encode the top 3 workflows into LIZA OS as executable standards. The audit stands alone. You are under no obligation.

Why us

LIZA OS is the operating system for AI-native organizations. We built it because every other category in the AI stack is passive: Systems of Record (Notion, Veeva) store, Systems of Output (Salesforce, SAP) produce, copilots react. None of them define how your organization actually thinks. LIZA is the active Context Layer that does. This audit is the only diagnostic on the market built on that premise, run by the practitioners who built the category, with 15+ years of shipping data and AI systems for enterprise.

To start, reply to the email or book a 30-minute scoping call.
