

# Your AI strategy is right. Your team isn't executing it.

A 3-week audit that pinpoints where adoption breaks, quantifies what it costs, and gives you the business case to fix it.

AI Opportunity Audit · €15,000 fixed fee · Remote delivery · Starts within 2 weeks.

---

## Why this audit is different

You wrote the AI strategy. You picked the tools. You shipped the playbooks. And six months in, adoption is uneven, output quality drifts week to week, and you cannot point to where the gap actually lives.

It is not your strategy. It is not the model. The gap is between the standards you have written down and what your team can actually execute on a Tuesday afternoon, inside Notion docs, Slack threads, and isolated ChatGPT windows that have no idea what your standards are. We call this the Instruction Gap: the distance between the policy and the prompt.

This audit measures it. We map where your team is forced to improvise, quantify what that improvisation costs you in hours and rework, and deliver a CEO-ready business case for closing the gap. You walk out with the evidence to unlock budget and the operating model to spend it well.

## What you get

- A map of where your team is improvising: the workflows where your written standards are not making it into daily execution, and why.
- A diagnostic of your current execution stack (Notion, Slack, ChatGPT, Copilot, bespoke tools) showing where contradictions and undefined standards are quietly degrading every AI output.
- The 5 to 8 highest-leverage workflows where enforced standards would compound fastest, ranked by ROI and adoption risk.
- A quantified cost-of-inaction: hours lost to rework, knowledge leakage, inconsistent output, and shadow AI. Most mid-market orgs we measure carry 400k to 700k EUR per year in this hidden cost.
- A CEO-ready business case (PDF and slide-ready) with conservative, expected, and aggressive scenarios.
- A 90-day enforcement roadmap your team can execute, with or without LIZA OS.
- One executive readout (60 min) with you and, if you choose, your CEO or COO.

## Timeline

|               |                                                                                             |                                            |
|---------------|---------------------------------------------------------------------------------------------|--------------------------------------------|
| <b>Week 1</b> | Discovery: 4–6 interviews (you + key operators), workflow shadowing, current-state mapping. | Workflow inventory + adoption barrier map. |
|---------------|---------------------------------------------------------------------------------------------|--------------------------------------------|

---

|               |                                                                                                              |                                                      |
|---------------|--------------------------------------------------------------------------------------------------------------|------------------------------------------------------|
| <b>Week 2</b> | Synthesis: Quantification of cost-of-inaction. Prioritization workshop with you. Draft of CEO business case. | Draft ROI model + ranked opportunity list.           |
| <b>Week 3</b> | Refinement and executive readout. Final business case and 90-day roadmap delivered.                          | Final business case PDF, roadmap, executive readout. |

## What we need from you

- One internal sponsor (you) for ~4 hours/week across the 3 weeks.
- Access to 4–6 operators for 45-minute interviews.
- Read-only sight of your current AI strategy doc, playbooks, and any usage telemetry.
- One 60-minute executive readout slot in Week 3.

## Pricing

**€15,000** fixed fee, invoiced 50% on kickoff, 50% on delivery of the executive readout. No success fees, no add-ons during the engagement.

If, by the end of Week 1, you do not have full clarity on the scope and direction of the audit, we refund the kickoff invoice in full. No questions.

## What this is not

- Not a tool adoption survey. Glean, Guru, and the consultancies already do that. We measure the layer underneath.
- Not a generic AI maturity score. We map your specific execution gap and quantify your specific cost of inaction.
- Not a strategy doc. You already have one. This produces the evidence to fund executing it.
- Not a software pitch. The audit is product-agnostic. LIZA OS is one option in the roadmap, never the conclusion.
- Not a 6-month consulting retainer. Three weeks, fixed price, then we leave.

## What happens after

You walk out with a CEO-ready business case and the language to defend it. Most clients use the audit to unlock a €25k+ Operationalization Sprint where we encode the top 3 workflows into LIZA OS as enforced standards. The audit stands alone. You are under no obligation.

## Why us

We built LIZA OS because every tool in the AI stack reacts: Notion stores, Slack chats, ChatGPT answers. None of them enforce. The execution layer that turns strategy into daily, governed work simply did not exist, so we built it. This audit is run by the practitioners who built that category, with 15+ years of shipping data and AI systems for enterprise. It is product-agnostic: LIZA OS is one option in your roadmap, never the conclusion.

To start, reply to the email or book a 30-minute scoping call.
